HABIB AL FAUZAN

Jakarta, Indonesia | habibalfauzan1@gmail.com | 6289648010876 | Website | GitHub | LinkedIn

Software Engineer with experience in backend development and smart factory systems for manufacturing environments. Skilled in optimizing system performance, troubleshooting complex issues, and maintaining reliable factory applications across multiple countries. Experienced in collaborating with global teams to develop, integrate, and improve business-critical systems. Passionate about building scalable, efficient, and reliable software solutions.

EXPERIENCES

Software Engineer

LG Sinarmas Technology Solutions | *December 2024 – Present*

- Developed EIF (Equipment Interface) systems in C# for new production lines in US site, implementing equipment communication, data processing, and integration with MES (Manufacturing Execution System) to support reliable data flow.
- Migrated and optimized approximately 800 SQL queries from Microsoft SQL Server to Oracle SQL, refactoring SQL logic for compatibility and performance within a logistics business-logic system for Poland site.
- Migrated and adapted existing EIF source code to support a Solace-based event-driven environment, aligning equipment communication with the new messaging architecture.
- Migrated the EQCIM system from legacy .NET to a Java Spring Boot and React architecture, modernizing the application stack and user interface.
- Developed HMI web interfaces for production operators and maintenance teams to monitor equipment status, conditions, and operational performance.
- Provided production support for EIF system in daily factory operation, investigating and resolving system issues by analyzing application behavior, system logs, source code, and data flows.
- Performed integration testing and validation across equipment, EIF, and MES, verifying data transmission, system communication, and business logic.
- Collaborated with overseas engineering teams on software development, system testing, migration, and production deployment across global manufacturing sites.

IT & Data Science Developer Intern

United Tractors | *February 2024 – June 2024*

- Developed an annual schedule generator that handles more than 3000 events per year
- Built and optimized the application using Flask and SQLite, improving scheduling efficiency and data processing
- Enhanced data management and query performance to support faster and more accurate schedule generation

Data Scientist Project-Based Intern

Rakamin | *October 2023*

- Cleaned and pre-processed large sales datasets to ensure data integrity, quality, accuracy for analysis
- Conducted clustering analysis to identify distinct customer segments and provide actionable insights for customer engagement strategies
- Implemented machine learning models for sales forecasting and customer segmentation
- Developed interactive visualizations to highlight key sales trends and business insights

Cloud Computing Cohort

Bangkit Academy | *February 2023 – August 2023*

- ❖ Developed backend API for capstone project using ExpressJS
- ❖ Utilized Google Cloud services, including Compute Engine, App Engine, Cloud Storage, and Firestore, to support application deployment and data management
- ❖ Supported cloud and backend integration to enable data storage, retrieval, and application functionality

EDUCATIONS

Bachelor of Information System

Universitas Pembangunan Nasional Veteran Yogyakarta | GPA 3.86/4.00 | 2020 – 2024

Relevant Coursework: Web Development, Database Management System, Algorithm, Mobile Development, Cloud Technology, UI/UX Design, Software Development, Business Process Modelling, Customer Relationship Management, Software Quality Assurance.

FEATURED PROJECTS

Mini MES | GitHub

.NET 10, ASP.NET Core, React, TypeScript, PostgreSQL, SignalR, Docker

- ❖ Built a manufacturing execution system for a simulated electrode line, featuring work order execution, lot genealogy, quality control, equipment monitoring, alarms, and real-time events.

Factory Equipment Monitoring | GitHub

Python, FastAPI, OPC-UA, React, TimescaleDB, Redis, Docker, Grafana

- ❖ Built a real-time equipment monitoring platform that collects and processes industrial machine data through OPC-UA. with FastAPI backend APIs, time-series data storage, Redis for fast data access, Grafana for operational monitoring, containerized with Docker.

AI API Gateway | GitHub

Go, PostgreSQL, Redis, React, Docker

- ❖ Built a high-performance AI API gateway with request throttling using Go, Redis, and PostgreSQL, with a React management interface and Docker-based deployment.

Predictive Maintenance ML Pipeline | GitHub

Python, FastAPI, XGBoost, MLflow, Prefect, PostgreSQL, Docker

- ❖ Built an end-to-end predictive maintenance pipeline using NASA C-MAPSS data and XGBoost, with MLflow for experiment tracking, Prefect for orchestration, and Docker for deployment.

CERTIFICATIONS & CREDENTIALS

Oracle Cloud Infrastructure Architect Associate — Oracle | 2026 | [Credential]
REST API (Intermediate) — HackerRank | 2026 | [Credential]
SQL (Intermediate) — HackerRank | 2026 | [Credential]
Junior Web Developer Certification — BNSP | 2022
Google Data Analytics Professional Certificate — Google, Coursera | 2022 | [Credential]
Building with the Claude API — Claude | 2026 | [Credential]

TECHNICAL SKILLS

Languages	: C#, Java, Python, JavaScript
Backend	: .NET, Spring Boot, Express.js, FastAPI, Flask
Frontend	: React, HTML, CSS
Database	: PostgreSQL, SQL Server, Oracle Database
Cloud & DevOps	: Google Cloud Platform (GCP), Oracle Cloud, Docker
